

New Order from a German Subcontractor in the Automotive Industry

AGAB Pressautomation has once again received an order for a mobile die change cart from a German subcontractor in the automotive industry. This time they chose a WG Mobile XL, a die change cart that can handle really heavy and large press dies.

– The customer already has a die change system from AGAB, but because they are waiting for new large press dies, they need a bigger die change cart, says AGAB's project manager Andreas Heinbockel.

AGAB's new series of mobile die change carts are very user friendly. The operator positions the die change cart easily and safely in front of the press with the help of laser guidance.

– An easy and a smart way to increase the production is to speed up the setup time. By using AGAB's die change carts the setup time is minimized and valuable production capacity is released, providing competitive advantage and confidence from the customers, explains Anders Glerup, AGAB's CEO.
